

BasicRegulate Temperature

Electrical diagram

Connection to EC-Motor

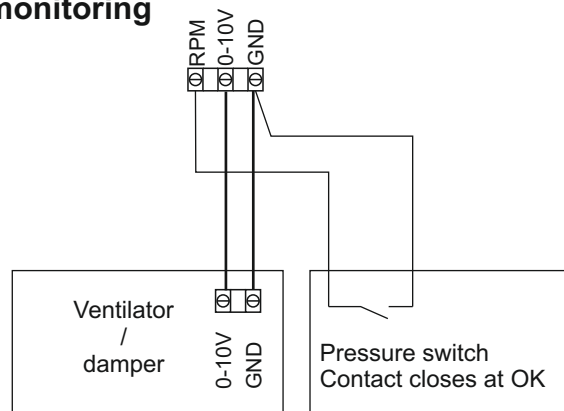

NOTE: If BasicRegulate is not connected to neither EC-motor nor PressureSwitch the GND and RPM clamps must be connected to each other and input type must remain at default setting (pressureSwitch)

Operation

Press the arrow-up or down shortly to get the current temperature value. Pressing either arrow-up or down for 3sec. opens the possibility of changing the temperature set-point. Use arrow up/down to adjust the value up or down. Set-point is locked after 10sec.

Connection for damper/Ventilator or filter monitoring

Technical Specifications:

Power Supply: 230V AC 50Hz $\pm 10\%$
 0-10V Output: 5mA
 230V Output: Max 2A !
 Working Area, Temperature: 0-40°C
 Adjustment Area, Temperature: 14-27°C

Enclosure: IP20

Dimensions: 85x85x30mm

Description:

Regulator with build-in sensor and warning light.

The regulator supply a 0-10V output signal for a ventilator, damper or other equipment. Minimum output signal is adjustable.

BasicRegulate has a green LED lit, when operating and a red LED warning light which can be used for filter monitoring (if a pressure switch is connected) or for monitoring Tacho signal or rpm from an EC-motor / ventilator. If the 0-10V output is lower than 1.7V, the tacho / pressure switch is not monitored.

Default settings:

Minimum output (0-10V): 2V

Regulation direction: DOWN (Lower temperature gives higher output)

Input type (tacho or pressure switch): Pressure Switch

Changing default settings:

Simultaneously press down arrow up/down buttons for 30sec. until both operating and warning LED flashes.

Minimum output can now be adjusted up or down using the arrow up/down buttons. The lowest LED represents 0V, each LED represent 1V up to 10 LEDs lit= 9V)

After 10sec. without pressing any keys the possibility of altering the regulating direction opens. - The 3 lowest LEDs will be flashing when regulating direction is lower temperature - higher output. Push arrow up - then the top 3 LED flashes, to change direction to higher temperature - higher output).

After another 10sec. without using the arrow up/down buttons it will be possible to set input type to tacho or pressure switch. Pressure switch is indicated by the 4 LEDs in the middle are constantly lit - to change this setting to tacho - press the up/down arrow - when the 4 LEDs in the middle flashes tacho input is selected.

BasicRegulate returns to measure- / regulation mode 10sec after last keystroke at the end of above cycle.

Mounting:

Mount directly on wall or on top of a wall panel.
